Jacques Burillier joins NTi Audio

The addition of Jacques Burillier as the International Business Development Manager of NTi Audio marks a milestone in the NTi Audio Journey and will shortly propel the NTi Audio group into the first league of Noise and Vibration solutions providers. “NTi Audio is very proud for having been able to attract Jacques Burillier as he is a highly-reputed expert in the Noise market with an extensive competitive know-how and an excellent network around the globe” says Philipp Schwizer, CEO of the NTi Audio group.

Jacques Burillier will support NTi Audio on their journey to becoming one of the global solutions providers for Noise and Vibration measurements. “It was the spirit

of the dynamic and knowledgeable team of passionate people, their focus and the product range that convinced me to join NTi Audio“, comments Jacques Burillier.

The goal at NTi Audio is to offer to our customers the best solutions for the environmental noise assessment market, the building acoustic market and the noise and vibration monitoring markets.

Their solutions are smart, accurate, reliable, and designed to help you to minimize the measurement time in the field, and shorten the data post processing time. In other words, to make the expert consultant’s job quick and easy.

After 10 years as an acoustic consultant at AIF (former name of the French entity of Dekra Inspection company), Jacques joined a well-known French company as area sales manager, promoting the product catalogue of sound level meter and dosimeter for Environmental, building acoustic and health & safety markets.

For 23 years, as area sales manager, monitoring business developer and worldwide sales director, Jacques has always been committed to customers satisfaction and has been lucky to be involved in some prestigious projects, such as the noise and vibration monitoring of the Louvre Museum during the rehabilitation of the Visconti court, and the noise and vibration monitoring of the Radio France building restoration (national radio broadcaster).

Jacques Burillier always likes to discuss with customers, to better understand their needs and try to offer them a little more in quality and service. It has been the starting point for developing noise and vibration monitoring solutions for construction site.
