JOYNED MU16

JOYNED, a company with expertise in professional audio networking, presents the MU16 - the world’s first Milan-compliant USB interface delivering seamless AVB/Milan network connectivity to macOS, Windows, and iOS devices via USB-C - no drivers, no fuss. At the heart of the MU16 is a powerful USB-to-Milan bridge that transforms your device into a 16×16-channel Milan endpoint. Appearing as a class-compliant USB Audio Class 2.0 interface, the MU16 delivers pristine 32-bit audio, ultra-low latency, and rock-solid stability for live sound, studio production, and AV installations.

“The MU16 changes the game for anyone working with Milan,” says Fabian Braun, CEO and Founder of JOYNED. “For the first time, engineers and creators can connect directly to a Milan network from their Mac, PC, or iOS device - no drivers, no configuration. It’s a tool built for the real world, where reliability, simplicity, and quality matter.” Perform virtual soundchecks, monitor rigs, or route outboard processing with confidence. MU16 delivers transparent, 32-bit audio and flawless Milan-to-USB performance that holds up night after night. Precision-tune Milan-based installations directly from your laptop or iPad. MU16 provides a reliable 16x16 channel link to your networked system, ensuring consistent results. Get your studio networked with zero hassle. MU16 works out-of-the-box with any DAW via USB-C - enabling everything from stereo tracking to immersive multichannel workflows, all over Milan.

“MU16 is our answer to the growing demand for simplicity and cross-brand interoperability,” adds Christian G. Frandsen, Senior Audio Product Specialist supporting MU16 development at JOYNED. “It unlocks Milan for every engineer, producer, or technician - whether you're mixing a show, calibrating a system, or producing in the studio - stereo to immersive.”
