

### KLOTZ - XLR mixing adapter AB-MM and XLR-BMP

**New stereo-to-mono mixing adapters with resistor matrix and XLR by KLOTZ**

With the KLOTZ AB-MM and XLR-BMP stereo-to-mono mixing adapters, it is easily possible to reproduce a stereo signal via a 3.5mm or 6.35mm stereo jack through an XLR mono input of a mixing console or an active loudspeaker as a mono signal without distortion.

The resistor matrix integrated in the connectors ensures that level addition is prevented when summing the stereo signal in mono, thus guaranteeing absolutely distortion-free reproduction of the stereo signal in mono.

This makes it possible, for example, to play back a stereo signal from an MP3 player or laptop via only one active loudspeaker or to use a mono channel in a mixing console for the stereo source.

## KLOTZ - XLR mixing adapter AB-MM and XLR-BMP
