

Krotos Dynamic Crowd System

Krotos, a company with expertise in cutting-edge sound design software, announces the release of the Crowds preset pack for Krotos Studio. Tailored for use in film, TV, and video games, this latest preset pack brings dynamic crowd soundscapes to life, giving sound designers and filmmakers full control over the size, intensity, and character of crowd scenes in a matter of seconds. Whether it's a quiet café conversation or a roaring stadium, Crowds provides high-quality sounds and flexibility, delivering a tool that is truly the first of its kind.

Creating realistic crowd sound effects has always been one of the most challenging aspects of sound design. Traditionally, designers needed to layer multiple recordings, search through extensive libraries, and make endless tweaks to fit the sound into a scene. With Crowds, that process is completely streamlined. The preset pack allows designers and filmmakers to quickly shape everything from light murmuring to intense riotous mobs with just a few gestures, saving valuable production time. In addition, with built-in quick FX in Krotos Studio, users can adjust the space and scale of their crowd ambience, offering greater flexibility across a wide range of projects.

Whether you're adding subtle crowd noise to a dinner party or recreating the lively atmosphere of a late-night talk show, Krotos Crowds adapts to scenes requiring immersive, dynamic crowd sound. With real-time control over crowd size, intensity, and gender composition, the Crowds preset pack eliminates common sound design issues like repetitive loops and mismatched sound lengths.

Key Features of the Crowds Preset Pack:

- 16 high-fidelity presets, including Booring Crowd, Laughing Crowd, Mob Rage, Wedding Celebration, and more.
- Dynamic control over crowd size, intensity, and gender composition using an intuitive XY pad.
- Non-repetitive sounds that run continuously, from 30 seconds to 30 minutes
