

Lake People MC10

Three years ago, Lake People presented the first monitor controller from its manufacture, the MC100. 2024 saw the follow-up MC50 in its compact rackmount construction. The MC10 now continues this line - as a mobile monitor controller the size of a hand.

The Lake People MC10 takes the high-quality monitor management of the MC100 and MC50 and brings it into an incredibly compact format of 108 x 41 x 143 mm. That makes the MC10 the perfect solution for setups with little space - and for use on the road. During travel especially, the MC10 scores with its headphone amplifier in exquisite Lake People quality, fully bus-powered and not dependent on a separate power supply. Since it is a Lake People headphone amplifier, it integrates the Pre-Gain circuitry to tune the amplifier perfectly to the headphones used. The MC10 can optionally also be powered with a separate power supply to conserve battery life of the connected laptop or tablet.

Lake People MC10 provides excellent Monitor Control in pocket Format

Thursday, 22 January 2026 11:23

Two separate inputs and two outputs in addition to the two headphone jacks qualify the Lake People MC10 as a true monitor controller despite its size. The USB-C input accepts digital audio, the superb converter can process PCM with up to 384 kHz and 32 bit or DSD up to DSD 356. Analogue sources can be integrated via RCA, a switch on the front switches between the inputs. Speakers or other devices can be connected via XLR or RCA outputs. The two headphone jacks on the front in 1/4" and 1/8" configuration carry the same signal and can be used simultaneously. Individual buttons activate the respective outputs, so they can be used individually and simultaneously for playback.

Since 1986, Lake People is synonymous with finest quality made in Germany, and the MC10 continues this tradition. Manufactured in the German workshop, the MC10 is made exclusively from carefully selected, high-quality components. For example, the volume is controlled with an Alps RK27 potentiometer with a solid 18-mm knob. The typical Lake People manufacturing precision guarantees a long, reliable product life – even in demanding mobile use.

The NAMM show from 22nd to 24th January is the stage for the Lake People MC10 world premiere. Visitors find Lake People at the American Music & Sound booth 17710 (ACC North Level 2). Subsequently, the MC10 will celebrate its European debut from 3rd to 6th February at ISE at booth CS644 in the Innovation Park. The Lake People MC10 will be available from March 2026. The price will be announced shortly.
