Mercuriall Audio Ampbox v1.6.3

Mercuriall has released Ampbox to v1.6.3, a major update featuring a full code refactor. The update improves plugin load times, preset switching, and CPU efficiency, with better compatibility on Apple Silicon and DAWs like Pro Tools, FL Studio, Ableton Live, and Studio One.

Mercuriall has also tackled key stability issues, so you can now move Ampbox between tracks without crashes or freezes - even in complex sessions. Ampbox v1.6.3 is available now as a free update. To celebrate, we're offering 33% off all Mercuriall plugins - including our flagship SUN-100 amp, now at its lowest price since release. Visit the website below to download the update and grab your discount. The promotion ends on June 13, 2025 at 11:59 PM PDT.
