

Mercuriall Audio SUN-100

Mercuriall Audio introduces the new SUN-100 tube amplifier as part of Ampbox. The SUN-100 accurately replicates the legendary sound of the classic Soldano SLO-100 original version, released before the modern reissue. To achieve uncompromising sound realism, we have utilized our latest Neural Hybrid Engine technology v3.1. This technology combines the benefits of SPICE modeling of real electronic circuits with real-time neural network-based computation.

What's new:

- Enhanced mathematical models of triodes for maximum sound accuracy.
- Unique modeling approach that considers measurements and characteristics of each stage of the tube circuit.
- Full emulation of all amplifier channels, including an exclusive FX loop located before the tone block - this opens up entirely new possibilities for tone shaping.

Experience the power, dynamics, and warmth of a real tube amplifier on your computer today. A special price of \$79.99 is available for the next 7 days.
