

Mixland introduces the 280 PRE Plugin

Mixland have unearthed the raw, untamed sound of a vintage germanium preamp, extracted from a rare USA-made tape machine and beloved for its standalone use. It's not a household name, but those who know, know. This is the sound that's been fueling classic records for over half a century. 280 PRE delivers the unmistakable rich saturation, bright, musical texture, and unique character that has made this preamp an enduring studio favorite.

The 280 PRE is truly a tone-lover's dream, injecting instant character and vibe into any track. As a starting point, we highly recommend experimenting with it on drums, pushing the input gain to explore its saturation capabilities, and then sculpting the sound with the intuitive Lo-Pass Filter, Age, DRIFT, and MIX controls.

Compatibility:

- Available in AAX, VST3, and AU formats
- macOS M1, M2, M3, M4 Native (Mac OS X 10.7 and higher)
- Windows 64bit (Windows 7 and higher)
