MIXLAND TILT

Powerful passive equalizer plugin with fully-adjustable class-A vacuum tube output stage

MIXLAND and Kiive Audio have joined forces once again for another powerful plugin, TILT, a powerful passive tilt/shelving equalizer with an adjustable vacuum tube output stage. The curves and tube circuitry were modelled meticulously to provide a delicious and usable sound. The EQ section features 8 different frequency selections, linkable bands (per the traditional tilt format), and they can be unlinked for extra shelving flexibility. The user's EQ moves feed directly into the tube circuit and will influence the amount of drive and harmonic saturation that will be heard. Additionally, the user can control the amount of tube saturation using the grit

parameter, and the effect ranges from subtle warmth to a sizzly clipping extravaganza depending on the amount chosen by the user.

TILT will be available to purchase for $29.99 at the website below starting on January 28th 2022. It is available in aax, vst, and au formats, and is compatible with macOS X 10.7 & higher (Mojave is supported), Windows 7 & higher (Pro Tools 11 and above).

Features:

- Meticulously-modelled passive equalizer
- Linkable EQ bands for classic tilt function, or unlink for independent shelving boosts/cuts
- Delicious Class-A triode vacuum tube output stage with adjustable grit parameter
- Tube stage is post EQ, and is influenced directly by EQ moves that drive into it
- Satisfying scale animation that reflects the amount of attenuation chosen by the user
- Gorgeous tube visuals that glow brightly to convey the amount of tube warmth being applied
- Available in aax, vst, and au formats
- Compatible with macOS X 10.7 & higher, Windows 7 & higher (Pro Tools 11 and above)
