

Nembrini Audio Hughes & Kettner Puretone

The Hughes & Kettner Puretone Plugin is the latest high quality guitar amp plugin from Nembrini Audio. It has been faithfully modelled after the timeless Hughes & Kettner Puretone 25W amp which was built for tube purists. Nembrini Audio's Hughes & Kettner Puretone Plugin is an authentic digital recreation of the original Puretone guitar amplifier distinctive personality. Its single channel offers a pure stunning sound which evokes anything from crystal-clear clean tones to blues crunch and even rough and ready overdrive. Every element of the plugin has been created to ensure the guitar signal remains pristine at all times. The GROWL feature allows the tone stack to be cut to deliver an unfiltered and raw guitar sound. The Hughes Kettner Puretone Plugin delivers the same inspiring tone, reliability and feel as the original in the convenience of a plugin.

The new plugin features six carefully chosen cabinet emulations, four premium microphone emulations with selectable positions and a powerful impulse response (IR) loader. The pre-amplifier stomp section features noise gate, filters and overdrive and the post amplifier effects include an equalizer, tape delay and spring reverb.

Introductory price of \$49.99 (regular price \$139) is available until 31st January 2025. Hughes & Kettner Puretone Plugin is PC and Mac (VST2, VST3, AU, AAX) compatible.
