Nomad Factory Integral Studio Pack

Nomad Factory, powered by Plugivery Engineering, today announced the release of the fully modernized Integral Studio Pack, a comprehensive collection of 37 vintage-style analog audio plug-ins rebuilt to meet current operating system and DAW standards on macOS and Windows. Available immediately through the Nomad Factory store and authorized pro audio resellers worldwide, the updated bundle supports Intel 64-bit and Apple Silicon systems and includes AU, VST, VST3, and AAX formats.

The new Integral Studio Pack consolidates nine fully updated bundles into a single production toolkit covering recording, mixing, and mastering tasks. Each plug-in features high-resolution resizable interfaces with three selectable skins, an updated DSP framework, and a new interactive online manual. The release marks the completion of a major modernization effort across Nomad Factory's active catalog, bringing all currently available products into full 2026 compliance.

To celebrate the launch, Nomad Factory is offering introductory pricing through May 31, 2026, with discounts of up to 90% off retail. In keeping with the company's long-standing policy, the upgrade is free for existing customers. Integral Studio Pack

combines 9 fully updated bundles into a cohesive solution covering dynamics, EQ, saturation, modulation, delay, imaging, and channel processing - designed with a focus on tone, musical response, and creative coloration rather than clinical digital precision. Particularly suited to genres where character matters - including R&B, Hip-Hop, Rap, Pop, and Rock - the processors are engineered to deliver musical results immediately, even from default settings, much like classic hardware units.

Nomad Factory plug-ins are widely recognized for pairing visually distinctive interfaces with carefully tuned analog-style behavior refined by professional producers and engineers.
Fully Modernized for Today's Production Environments Built on Nomad Factory's latest framework developed by Plugivery Engineering, the updated collection ensures seamless compatibility with modern workflows.

Key Specifications

- 37 fully 2026-compliant plug-ins
- Native support for Intel 64-bit and Apple Silicon processors
- Formats: AU / VST / VST3 / AAX
- Hi-resolution, fully resizable GUIs
- Three selectable interface skins
- New interactive online user manuals

All products currently available from Nomad Factory and authorized resellers now meet modern OS and DAW requirements. With this release, Nomad Factory returns as a strong contender in the vintage-style plug-in market, delivering analog-inspired sound comparable to premium offerings while remaining significantly more affordable. Introductory pricing runs through May 31, 2026, with discounts of up to 90% off standard retail pricing. Existing customers receive the upgrade at no cost.

To maintain consistent compatibility standards, several older titles have been removed from sale until they can be rebuilt on the new framework, including:

- BlueVerb
- Bus Driver
- Analog Signature Pack [3 plugins]
- Analog Studio Rack [7 plugins + Host]
- Drum Tools
- Essential Studio Suite [9 plugins]
- Garbage LSD
- Magma [65 Plugins + Host]
- Rock Amp Legends

Existing owners may continue using these legacy products with their original 12-digit serial numbers. Newly issued licenses for updated bundles use a modern 32-digit authorization system and do not include legacy titles. Legacy products can still be authorized alongside updated plug-ins using original serials. Nomad Factory

intends to update these products as development resources permit. Integral Studio Pack is available immediately from Nomad Factory and authorized Pro Audio Resellers worldwide at the Introductory price of only $110 (LIST $1499) through May 31, 2026.
