

# Novation FLpad

Novation today announces its latest collaboration with FL Studio maker, Image-Line. FLpad, the first 8x8 grid controller made specifically for FL Studio, brings a fast, groovebox-like workflow to the Channel Rack, offering beatmakers new ways to get hands on with their projects.

The range comprises FLpad and FLpad Mini. The former features a larger grid and velocity-sensitive pads for expressive playing, while the latter is geared towards grab-and-go creation or more compact setups. Both sizes offer 64 RGB-backlit pads with direct access to step sequencing, finger drumming, and melodic playing - either chromatically or locked to a chosen scale.

Alongside the 8x8 grids, both FLpad and FLpad mini also feature an array of dedicated controls for navigating the sequencer and channel rack, building tracks with Patterns, mode switching, transport control, undo/redo, and more. Novation Components makes it easy to create custom layouts for specific FL Studio workflows or for working with other software and hardware.

"We're proud to partner with Image-Line once again and build on the momentum of FLkey 2 with a new line of hardware controllers," says Novation Product Manager Mario Buoninfante. "Through our previous collaborations with Image-Line, we've gained a deep appreciation for what makes this DAW so beloved of beatmakers. This understanding has led us directly to FLpad - a grid controller made specifically to augment FL Studio's unique workflows in intuitive and inspiring new ways."

While FLpad shares the form factor of Novation's ubiquitous Launchpad range, its DNA is entirely new; from its user interface to its firmware and DAW scripts, FLpad has been designed with FL Studio's Channel Rack in mind. All FLpad controllers

include six months of FL Studio Producer Edition plus a range of premium instruments and effects from UVI, GForce, and Klevgrand, along with finger-drumming lessons from Melodics.

### Key Features:

- **Made for FL Studio:** Get hands-on in the Channel Rack, sequence drums and melodies, play parts live, and create Patterns directly from FLpad.  
Make beats in the Channel Rack: Select and trigger your samples directly from the pads. The full-size FLpad features velocity-sensitivity for expressive playing.
- **Step-sequence your ideas:** Quickly create and edit melodies, basslines, and drum patterns for up to four instruments at once.  
Play drums live: Tap in drum patterns with dedicated layouts for FPC, Slicex, and Fruity Slicer.  
Perform basslines, melodies, and chords: Note mode allows you to play and sequence melodic instruments - either locked to your chosen scale or chromatically.
- **Build tracks with Patterns:** Develop your ideas directly from FLpad. A dedicated view makes it easy to create, select, clear, and duplicate Patterns. Edit every note directly on FLpad: Get hands on with FL Studio's Graph Editor, directly from the grid.
- **Control the Channel Rack mixer:** Turn FLpad's grid into a row of faders with Channel Rack Mixer mode.
- **Dedicated transport controls:** Stop and start playback and recording, undo actions, and more from FLpad's buttons.
- **Make it your own:** With Novation Components, it's easy to make your custom layouts for FL Studio - or your other software and hardware.
- **Everything you need to make beats:** FLpad comes with six months of FL Studio Producer Edition, a selection of instruments and effects, and finger-drumming lessons from Melodics.
