

NTi Audio XL3 Acoustic Analyzer V1.54

With Firmware V1.54, users can now conveniently create their own configurations for the XL3 Acoustic Analyzer. This is made possible by a new feature on the XL3 web page: the Config Editor. All XL3 settings can be individually customized in the Config Editor. The created configuration then appears directly in the list of measurement functions on the XL3.

Predefined configurations – for example, for various live sound monitoring standards – are available for download on the the website below. New in this version, XL3 users can now also create and manage fully custom configurations.
