Baby Audio Transit

Baby Audio has teamed up with Andrew Huang to create a type of plugin that didn't exist until now. Transit is an FX plugin that'll give your mix transitions super powers. Use it for motion effects, build-ups, drops, risers and sweeps. Creative transitions between song parts play a vital role in keeping listeners engaged. To make them, producers rely on multiple tracks and plugins – and a suffocating amount of automation lanes.

Transit simplifies this process down to just one plugin. It hosts 18 powerful effect-modules, freely loadable across 7 slots. All effect parameters can be linked to a global Macro Control, which you automate to create complex FX transitions with one knob movement. The result: More engaging, less static, mixes.

Intro sale: $59 (Reg: $99).
