

# Playfair Audio Dynamic Grading v2.0.4

Playfair Audio has announced the release of Dynamic Grading v2.0.4, a maintenance update that delivers a range of user-requested improvements and fixes designed to enhance workflow stability and precision.

Dynamic Grading 2 revolutionises dynamic processing by using an intuitive GUI and dynamic histograms, allowing users to independently compress or expand the punch, body, and floor of an audio signal. It offers a more precise and unique way to shape audio dynamics than traditional compressors, making advanced processing like noise cleanup, transient shaping, and adding depth easier to achieve for various audio tasks, from music to post-production. There's support for multi-channel formats up to 9.1.6, a magic eye spectral display, and a number of factory presets that can be adjusted and stored as desired.

Dynamic Grading v2.0.4 adds full support for importing patches from version 1.3, ensuring users can easily transfer their settings and continue working seamlessly across versions. The update also introduces parameter text entry for ratio and gain sliders, as well as threshold markers, giving users greater precision when fine-tuning dynamics. Further refinements include improved range checking behaviour

## Playfair Audio releases Dynamic Grading v2.0.4 Maintenance Update

Thursday, 09 October 2025 16:00

for automation and controller mappings, and more accurate host-reported values for the Time Window parameter when using the “Set Time Window in Seconds” option. Visual consistency has also been improved, resolving incorrect display issues for gain values and the smart latency button.

Updates at a Glance:

- Support for importing patches from Dynamic Grading 1.3 via Copy/Paste
- Parameter text entry for ratio and gain sliders, and threshold markers
- Improved range checking behaviour for automation and controller assignments
- Correct host display of Time Window parameter values when using “Set Time Window in Seconds”
- Fixed incorrect display of certain gain parameter values
- Fixed display issue affecting the smart latency button

Dynamic Grading v2.0.4 is available now as a free update for existing users, or priced €149 for new users. A 14-day free trial can be downloaded from the Playfair Audio website.
