PSI Audio A226-MAIN APA-700

PSI Audio now offers the main studio monitor A226-MAIN with the option to externalize its electronics as the new APA-700. The external Analogue Power Amplifier (APA) grants easy access to all controls when the monitors are soffit-mounted. The APA-700 takes the electronics from the A226-MAIN and turns them into a remote amplifier. The 3U 19-inch-rack-compatible unit allows for up to five meters of distance between speaker and electronics through a proprietary connection, which makes it perfect for controlling wall-embedded A226-MAIN in professional studios. The APA-700 provides rotary knobs for roll-off and level. The device can also be activated or deactivated through a dedicated standby button.

While the APA-700 outsources the amplification section of the PSI Audio A226-MAIN, the speaker itself remains unchanged and delivers the outstanding fidelity the Swiss manufacturer is known for. The newly developed aluminium coil dome tweeter accurately depicts every detail in the high-frequency range. It is carefully paired with the renowned EXD midrange driver from PSI Audio and the two 10-inch woofers with double flow guide bass reflex, which make the A226-MAIN a mighty main monitoring system with an accurate representation of transients whilst delivering a clean and powerful low end.

As the flagship monitor speaker, the A226-MAIN combines all the proprietary technology that already gave the other PSI Audio speaker models their impressively accurate sound properties. The all-analogue APA-700 honours that tradition by powering the speakers with high SPL output and low distortion. In combination with the Compensated Phase Response (CPR) for perfectly aligned audio reproduction, and the Adaptive Output Impedance (AOI) that monitors membrane movement and optimizes transients, the A226-MAIN APA-700 meets even the highest criteria of demanding listening situations.

Like all PSI Audio products, the A226-MAIN APA-700 is developed, built, and calibrated entirely by well-trained specialists in the company’s own manufacture in Switzerland. From the careful selection of components to the final assembly of each unit, every step in the production process is executed with the world-famous Swiss precision. The PSI Audio A226-MAIN APA-700 is available for preorder immediately.
