

## PSP Tilt-Q

PSPAudioware announces the release of PSP Tilt-Q, a musical and intuitive tilt-type equalizer plug-in designed to deliver fast tonal shaping with the sonic depth and precision expected from PSP. With a tilt EQ, contour (loudness) control, and high-quality high- and low-pass filters, each offering multiple response characteristics, PSP Tilt-Q adapts easily to tracks, buses, and full mixes. Its sound remains smooth and cohesive even when used across many channels. Powered by 64-bit double-precision processing and PSP's proprietary soft saturation, PSP Tilt-Q delivers musical results without harshness - helping your mix feel open, connected, and effortless.

### Key Features:

- Tilt Equalizer with Three Characteristics Musical tilt EQ offering three distinct curve shapes, allowing you to quickly rebalance lows vs highs while choosing between classic, low-high focused, or mid-centric behavior.
- Contour (Loudness) Equalizer with Three Characteristics A loudness-style EQ designed to enhance lows and highs while shaping the midrange, with three selectable response characteristics inspired by classic hardware loudness designs and soft curve equalisers.
- High-Pass & Low-Pass Filters Independent HPF and LPF with selectable 6, 12, or 24dB/octave slopes for precise low- and high-frequency range control.
- Flexible Channel Processing Apply processing to Left, Right, Mid, Side, or full

## PSP Tilt-Q: Effortless Tonal Balance with Musical Intent

---

stereo signals - ideal for stereo imaging, mastering, and corrective EQ work. FAT Double Sampling Automatic oversampling for lower sample rates (below 50kHz) ensures consistent, high-quality processing across all supported sample rates.

64-bit Double-Precision Processing Ultra-high-accuracy internal processing minimizes cumulative errors, preventing noise buildup and preserving natural filter behavior.

Second-Generation Output Saturation (SAT) Optional soft saturation at the output stage adds smooth analog-style drive while protecting against digital clipping.

Integrated PSP Spector PSPEC-31 Analyzer Built-in 31-band spectrum analyzer with bar or curve display modes, allowing real-time visualization before or after EQ processing.

Intuitive, Console-Style Interface Designed for fast, musical decisions with minimal controls - ideal for mixing, mastering, and tone shaping without overthinking.

PSP Tilt-Q is available now with a special introductory price of \$49 USD until February 28th, 2026 (regularly \$99). A 30-day free trial is available for macOS and Windows.

### Minimum System Requirements:

- Windows 7 - Windows 11
- macOSX 10.15 - macOS Tahoe
- AudioUnit, VST3, VST, AAX
- 64-bit compatible application
