

# RØDECaster Studio & RØDE Capture

**RØDE**CAPTURE

## RØDECaster Studio

RØDECaster Studio is an innovative new desktop application designed to revolutionise how podcasters and audio creators edit, refine and publish spoken-word content. Developed by RØDE's state-of-the-art UK AI Lab, RØDECaster Studio combines studio-grade transcription accuracy, intuitive speaker identification and a suite of AI-driven editing tools to streamline post-production workflows like never before. Available for both Mac and Windows, RØDECaster Studio supports seamless import from compatible RØDECaster devices, including direct-to-cloud workflows via RØDE Cloud. Creators can record on a RØDECaster Pro II or RØDECaster Duo and continue editing instantly in the app, with projects automatically synced and accessible across devices.

With its next next-generation transcript-based editing engine, RØDECaster Studio can generate highly accurate transcripts with word-level timestamp alignment and intuitive speaker identification. Integrated speaker profile management and automatic voice recognition ensure precise host and guest labelling, enabling structured navigation, topic-based editing and faster review of long-form conversations.

Creators can also refine dialogue simply by editing text. Advanced AI-powered in-painting tools allow words or entire phrases to be corrected or replaced naturally, preserving tone and cadence without requiring re-recording. RØDECaster Studio also features an integrated voice and chat-powered RØDE Assistant, capable of handling high-level editing tasks through natural-language commands. Creators can trim intros and outros, remove filler words and gaps, apply censorship, smooth speech or request meaning-based edits simply by asking while preserving the authenticity and character of every recording.

RØDECaster Studio also introduces a flexible composition system, enabling users to generate multiple versions from a single recording. Highlight reels, concise cuts and alternate edits can be created non-destructively, while the original recording remains intact and instantly recoverable. Beyond editing, RØDECaster Studio streamlines the path to publication. Automatic title and summary generation accelerates content preparation, while one-click export presets optimise sample

## RØDE introduces the RØDECaster Studio Software & RØDE Capture

---

rate, format, bit depth and loudness for major platforms including Spotify, Apple Podcasts and YouTube. Full audio, selected clips or transcripts can be exported in professional formats, ensuring platform-ready results with minimal manual configuration.

With real-time waveform analysis and proprietary AI enhancement models delivering balanced, studio-grade sound automatically, RØDECaster Studio represents a significant evolution in podcast production – uniting capture, cloud workflow, intelligent editing and distribution within a single, cohesive system. Future-facing and creator-focused, this latest innovation further extends RØDE’s ecosystem beyond audio capture and into a new era of intelligent editing. RØDECaster Studio is now available for Beta testing.

Following extensive user demand, RØDE Capture, the intuitive video and audio recording phone application, will soon be available on Android, expanding its reach beyond iOS for the first time. Designed to deliver professional-quality video and audio with ease, RØDE Capture has become an essential tool for on-the-go creators, with this highly anticipated expansion set to make it accessible to more users around the world.

The Android release will introduce support for a wide range of devices, while bringing with it one of RØDE Capture’s most innovative features: Direct Connect. This functionality allows Wireless Micro, Wireless GO (gen 3) and Wireless PRO transmitters to connect directly to a smartphone via Bluetooth, eliminating the need for a receiver and enabling a streamlined, ultra-portable recording setup. Whether capturing content on the move, filming interviews, or creating social media videos, users can achieve high-quality wireless audio faster and more easily than ever before.

Combined with RØDE Capture’s intuitive interface, dual-camera recording modes and complete in-app control of compatible RØDE microphones, the Android version delivers the same advanced creative toolkit that iOS users have come to rely on. This expansion marks a significant step forward in making professional mobile content creation more flexible and efficient.
