

Roswell Pro Audio Mini K Mic K67x

A transformer-rich sound loaded with harmonics, air, and character

Roswell Pro Audio announces a new addition to their popular Mini K microphone collection with the Mini K67x, adding a new sonic dimension to a diverse product range that includes the Mini K47, Mini K47 KD, and Mini K87. The first in the line

with a transformer-coupled circuit, the new Mini K67x is designed to infuse color, character and mojo into vocal and instrument tracks. The mic retains the “point and shoot” simplicity of the Mini K lineup, as well as the familiar compact form factor that makes it a breeze to position where many larger mics struggle to fit.

“If all of your microphones sound the same, you'll be in for some rough sessions,” says Roswell Pro Audio Founder Matt McGlynn. “Painters have many different colors. Recording artists and engineers should, too. We call this idea 'sonic diversity,' and we design microphones to deliver that promise. Each of the Roswell microphones has a unique sonic signature. The Mini K67x expands the aural landscape of the Mini K product line with a harmonically rich circuit and a unique new capsule design.”

The mic's name, “K67x,” refers both to the capsule design and circuit topology. The capsule is dimensionally based on the K67, although Roswell has created a proprietary voicing, which gives the mics its characteristic extended frequency response. The “x” refers to the transformer-coupled circuit, designed to complement the source with rich harmonics.

This combination introduces a new flavor to the Mini K product line. The sonic inspiration for the K67x was the workhorse tube mic of the 1960s, which offered wideband frequency response and harmonics. The K67x capsule offers an alternative color to the Mini K47 and Mini K87, as well as an entirely unique texture.

Features:

- Proprietary 34mm capsule design
- Vintage circuit design with custom output transformer
- Hand-selected, audiophile-grade capacitors
- Heavy, solid steel body with durable finish
- Exclusive Cutaway non-resonant shock mount

Benefits:

- Wideband frequency response provides natural capture of many sources
- Harmonic saturation enhances the source, much like a tube microphone would
- Solid, high-quality construction ensures real-world durability and long service life
- Low self-noise keeps hiss out of your tracks

The Mini K67x has a durable metallic gray finish. Each mic ships with Roswell's exclusive Cutaway shockmount, a microfleece mic sock and a flight case. Like all Roswell microphones, the Mini K67x is designed, assembled, and tested in California.
