# New & Updated sE Electronics Accesories

sE Electronics updated several core accessories with the same goal we apply to our microphones: better build quality, smarter design, and fewer compromises. These updated SKUs will now ship with their respective products going forward and will also be available as standalone items.

Updated accessory SKUs:

- MC01 – A newly reinforced microphone clip designed for the sE6160 shotgun microphone, with the added flexibility to securely mount DM-series preamps and DIs.
- MC03 – An improved, more durable microphone clip built specifically for the V-Series vocal microphones.
- WS07 – An external windscreen now available as a separate accessory for V-Series microphones.
- WS12 – A redesigned windscreen for the VR1 and VR2 ribbon microphones, offering improved fit and durability.
- WS44 – A refreshed windscreen compatible with the sE4100, sE4400, T1, and T2 microphones.
- DM PRO CLIP – A professional mounting solution for DM-series preamps and DIs, including multiple mounting options for flexible setups.

These updates reflect a continued focus on quality and real-world usability – the kind you can spot immediately, without needing a spec sheet.
