

Sessiondesk STAND-UP 92 & STAND-UP 107

The studio furniture specialist presents new speaker stands and updated TAV and HOME studio desk series. The company will present the completely new STAND-UP 92 and STAND-UP 107 monitor stands. The TAV 2.0 series will be presented in its new ecological finishes, while the TAV and HOME series have undergone a subtle shape overhaul. The popular MODULAR system will also be on display at the show. Visitors will find Sessiondesk along with AudioScape and Gyraf Audio at booth 0120.

At NAMM 2025, Sessiondesk presented two new solid speaker stands. STAND-UP 92 and STAND-UP 107, which are now on display at SUPERBOOTH 2025. They are made of wood and can support up to 35 kg (77 lbs). The STAND-UP 92 holds the speakers

92 cm above the floor, while the STAND-UP 107 raises them to 107 cm. Both stands feature integrated cable management to eliminate cable clutter and include decoupling pads to get the maximum performance out of the speakers of choice. STAND-UP 92 and STAND-UP 107 are available now and are sold each as a pair.

Sessiondesk is always looking for improvements and has updated the entire TAV product range with new finishes and careful visual adjustments. The new finishes are environmentally friendly and demonstrate the company's commitment to protecting the environment. The tables are available in black or white ECOPLEX or in translucent, brown or gray natural-based ECOGRAIN. Sessiondesk has also slightly revised the shapes of the TAV tables, as well as the HOME tables. Both series are made from 100 percent birch wood, resulting in solid, high-quality furniture that increases productivity in the studio.

Sessiondesk will be exhibiting the TAV 2.0 and HOME 2.0 series because they have been updated, but the MODULAR system will also be there - simply because it is a timeless classic. The series, which started the brand over 10 years ago, has become a favorite of audio professionals around the world, partly because of its aesthetic and practical design, partly because of its exceptional craftsmanship and partly because of its namesake versatility. The concept is so popular that the idea behind MODULAR may even reappear in something entirely new with X.

New products and product updates are tangible news and as such comparatively easy to present at a trade fair. At Sessiondesk, however, much more happens behind the scenes. The fully recycled packaging concept, for example, uses no plastic and optimizes space efficiency, resulting in a smaller ecological footprint. To offset the remaining ecological footprint, Sessiondesk plants a tree for every 100 bucks spent. These improvements are more difficult to present at a trade fair, but they are an essential part of the Sessiondesk brand.
