

Sessiondesk STAND-UP, TAV and HOME Series

Sessiondesk will be exhibiting at NAMM 2025 from 23rd to 25th January 2025 at booth 14908 of the Anaheim Convention Center. The studio furniture specialist will present new speaker stands and updated TAV and HOME studio desk products. At NAMM 2025, Sessiondesk introduces two new solid speaker stands. STAND-UP 92 and STAND-UP 107 are made from wood and can carry up to 35 kg (77 lbs). The names signify the stands' respective heights, with the STAND-UP 92 holding speakers 92 cm (36 inches) above the ground, while the STAND-UP 107 elevates them to 107 cm (42 inches). Both stands feature integrated cable management to avoid clutter, and include decoupling pads to get maximum performance out of the speakers of choice. STAND-UP 92 and STAND-UP 107 are available immediately - sold as pairs.

Always looking for ways to improve, Sessiondesk has updated the entire TAV range of desks with new finishes and careful visual adjustments. The new finishes are eco-friendly, attesting the company's commitment to protecting the environment. The desks are available in black or white ECOPLEX finish, or in translucent, brown or grey wax and oil tones. Sessiondesk has also slightly updated the TAV desks' shapes, same with the HOME desks. Both series are made from 100 percent birch wood, resulting in solid, high-quality furniture to boost productivity in the studio.

While Sessiondesk will exhibit the TAV and HOME series because they were updated, the MODULAR system will also be present - just because it is a timeless classic. The series that started the brand over 10 years ago has become a favourite of audio professionals everywhere, partly because of its aesthetic and practical

design, partly because of its exceptional craftsmanship, and partly because of its eponymous versatility. The concept is so popular that the idea behind MODULAR may even reappear in something entirely new with X: visitors at NAMM are cordially invited to come along and find out more about it.

New products and product updates are tangible news, and as such are comparatively easy to showcase at a show like NAMM. At Sessiondesk, however, there is a lot more going on behind the scenes. The fully recycled packing concept, for example, uses no plastic and optimizes space efficiency, resulting in a smaller ecological footprint. To counterbalance what remains of that footprint, Sessiondesk plants a tree for every 100 bucks in purchases. These improvements are harder to present on a show floor, but they do make a significant part of the brand Sessiondesk.

From 23rd to 25th January 2025, Sessiondesk can be found at booth 14908 together with long-term partners AudioScape. This partnership also helps facilitate the distribution of Sessiondesk products in North America: from the beginning of 2025, all products will be available everywhere in the US via the company website below. The teams of both companies look forward to interesting questions and engaging chats.
