sonible pure:level

sonible has expanded the pure:bundle with the addition of a new plugin, pure:level. This new processor provides a simple way to keep recordings consistent in level while preserving their natural dynamics. With a unique group feature, multiple instances of pure:level can be linked to share a common target level.

pure:level automatically stabilizes levels so tracks behave consistently, giving users a solid starting point for mixing. By combining intelligent leveling and level riding with just a few intuitive controls, pure:level keeps vocals, dialogue and instruments steady in level so users can place them confidently in the mix. pure:level isn't a one-trick pony though – the compact tool also introduces a unique group feature that allows users to control layered tracks as one element. Each track stabilizes independently, while the final output gain is synchronized across the group. This makes it easy to keep backing vocal stacks, guitar layers or multi-track recordings aligned without losing the natural nuances of each track.

Featuring intelligent signal analysis, pure:level listens to the input material performs dynamic level riding to compensate for short-term fluctuations and stabilizes the signal around its natural level. Unlike traditional dynamic leveling tools, pure:level combines level stabilization and mix placement. Changing the target does not alter

Phoca PDF

the signal’s dynamics – it simply moves the already balanced signal to the desired position in the mix.

pure:bundle is a collection of easy-to-use, AI-powered plugins makes mixing music more straightforward so producers can focus on their creativity. sonible’s intelligent processing makes it simple to set up and control production staples like compression (pure:comp), reverb (pure:verb) and EQ (pure:EQ), alongside innovative tools like pure:unmask, pure:limit, pure:deess – and now pure:level.

pure:level Features
:

- Automatic leveling and dynamic level riding for a natural sound
- Group feature for aligned levels across multiple tracks
- AI-powered analysis and intelligent processing
- Simple interfaces designed for fast workflows
- Available for PC and Mac in VST, AU and AAX formats

pure:level and all individual pure:bundle plug-ins are available individually for € 25,- (reg. € 39,-) each until April 20. The full pure:bundle is now available at an introductory price of € 99,- (reg. € 159,-) until April 20.
