Sonnet xMac mini (2024+)

Sonnet Technologies today introduced its xMac mini (2024+) rackmount systems for Apple Mac mini computers and Echo Thunderbolt to PCIe card expansion systems. Purpose-built for professional workflow expansion, the new systems fit into standard 19-inch equipment racks and combine:

- A 2U rackmount enclosure
- A mounting module for one or two Mac mini computers
- An optional Echo PCIe card expansion module that connects two or three full-height, full-depth (FHFD) PCIe cards via one or two Thunderbolt cables

Mac mini, powered by M4 and M4 Pro, delivers exceptional performance in a compact, affordable form factor. But professional users in audio, video, and broadcast production often need more: secure rackmount installation, additional connectivity, and PCIe expansion for high-end interfaces, DSP, and specialized workflow cards.

The xMac mini (2024+) family enables pros to rackmount one or two Mac mini computers in half of a space-efficient 2U steel enclosure and:

- expand workflows with robust PCIe card integration via Thunderbolt
- benefit from quiet operation, reliable cooling, and modular upgrade flexibility

Sonnet’s xMac mini (2024+) Systems transform the Mac mini into a true professional-grade rackmount solution - compact, rugged, and ready for the most demanding creative environments. xMac mini (2024+) systems are available now from Sonnet and soon from its worldwide distribution and reseller partners at the following suggested retail prices:

Phoca PDF

- xMac mini (2024+) Module for Two Mac minis (XMM-MOD) – $479.99
- xMac mini (2024+) Rackmount System Without Echo Module (XMM-SYS-0) – $699.99
- xMac mini (2024+)/Echo II DV 2U Rackmount System With Echo II DV Module (XMM-SYS-IIDV) – $1799.99
- xMac mini (2024+)/Echo III 2U Rackmount System With Echo III Module (XMM-SYS-III) – $1799.99
