Supercritical Redshift 6 Firmware 1.5

Supercritical have just released a new firmware update for the Redshift 6, now available on their website. Firmware Update 1.5 introduces a new FX section featuring four high-quality effect engines: Stage Reverb, X-Delay, Vintage Chorus, and Chorus+, along with a new VCF engine called Mirror Twins. The update also includes 14 new factory presets designed to showcase the new effect engines. The Redshift 6’s FX engines deliver production-level, 24-bit stereo effects. Its parallel signal path allows you to blend analog audio with DSP effects, combining the warmth and character of the analog signal path with the precision and flexibility of
