TAQS.IM SOLO 3.4

TAQS.IM introduces SOLO v3.4 – their best sounding and most playable version yet. This release brings new realism with Round Robin mode along with improvements in portamento and velocity, making SOLO feel more like a true hardware synth in your hands.

New Features:

- Add realism to your performances with Round Robin Mode - SOLO now cycles through multiple samples to avoid the "machine gun effect" and deliver more natural-sounding repetitions.
- SOLO's UI is now resizable! Drag from the bottom right corner to scale the interface. Need more space? A new full-screen mode gives you the ultimate immersive editing environment.
- Choose how glide behaves with new per-oscillator portamento modes - select between constant rate or time, and set the maximum glide interval in semitones.
- Legato just got smarter. Set the maximum number of semitones and time threshold for legato detection, giving you more musical nuance and control.

Fixes & Improvements

- Resolved an issue where some samples were cut short during playback
- Clicking the preset name now opens the preset browser
- Fixed cases where multiple modulation entries did not apply as expected
- Improved responsiveness of the Auto-Wah effect
- Fixed inconsistent volume when panning sounds
- Prevented duplicate preset entries from appearing after updates
- Added the ability to toggle portamento on/off directly
- General stability and performance enhancements
