# Tone2 Audiosoftware updates RayBlaster to v2.7.2

The update to v2.7.2 is available for free for all RayBlaster users. It adds a VST3 version, several enhancements and new features for PC. RayBlaster 2.7.2 is downward-compatible with all previous versions. All existing song projects and patches can be loaded without any further steps necessary.

New features:

- Added a VST3 version.
- You can select from 3 different installation types: Minimal (VST2 only), Default (VST2 + Standalone) and Full (VST2 + VST3 + Standalone).
- Added a Microsoft-approved certificate to the installer.
- HiDPI support for the VST3 version.

Enhancements:

Phoca PDF

- More beautiful keyboard graphics.
- More contrast.
- More smart detection of the VST2 path.
- Slightly higher performance.
- Smaller binary and slightly faster loading.
- More precise timing.
- Higher sound-quality in 44 kHz, 48 kHz and 88 kHz sample-rate.
- More robustness.
- Several small enhancements.

Fixes:

- Workaround for the 'unusual' designed audio architecture of FL Studio. It is not longer necessary to enable 'Use fixed size buffers' to avoid crackles.

Changes:

- Microsoft dropped support for 32-bit Windows. As a result, Tone2 Audio will not longer provide updates for it. If you still depend on it you can install v2.6 instead.
