Touellskouarn Distres Kontroll & Te Zo Koant mk2

The Distres Kontroll is a versatile CV-controllable overdrive module based on an OP07 Op-amp and a choice of two different diode and LED clipping stages. Its circuit is tuned to be versatile and stable and can produce a wide variety of saturation, overdrive, and distortion tones, while the built-in filter allows for further tone-shaping.

Te Zo Koant mk2 is an ultra-clean preamp module based on a dual JFET Op-amp design capable of up to 40db of transparent gain. The preamp circuit was designed for guitar, bass and e-piano sources, but also works with any synth sources that may need a clean gain boost. The internal filter and low-cut switch provide additional tonal control.

Touellskouarn Distres Kontroll Versatile Overdrive Overview & Features:

- Use cases: saturation / overdrive / distortion / tone-shaping / modulated drive
- Clip switch: toggle between diode (aggressive, fuzz-like) and LED (loud, more transparent, like a cranked amp) clipping
- CV control: CV modulation for overdrive gain and/or filter response

Phoca PDF

- Threshold knob: controls the level feeding into the drive circuit
- Gain knob: controls the amount of overdrive
- Filter knob: attenuate lows or highs (noon is bypass)
- Pad switch: attenuates input gain by 27db
- Versatility: designed for Eurorack, keyboard and guitar signals
- Build: 6HP aluminum panel, boutique, hand-wired in France

Touellskouarn Te Zo Koant mk2 Ultra-Clean Preamp Overview & Features:

- Use cases: bringing guitar, bass, and e-piano signals up to Eurorack levels / boosting keyboard sources / clean gain stage / tone-shaping
- Preamp: up to 40db of transparent gain, overload indicator, +6db boost switch
- Input: high impedance, 6,35mm jack
- Output: low impedance, 3,5mm jack
- Low Cut switch: 12db/oct highpass filter at 100hz
- Filter control: analog tone-shaping filter (CCW: smooth and dark / CW: treble boost)
- Build: 6HP aluminum panel, boutique, hand-wired in France
