

UA Empirical Labs FATSO Tape Simulator

Universal Audio Inc. (UA), a company with expertise in audio production tools, announces the native release of UAD Empirical Labs FATSO Tape Simulator plug-ins for macOS and Windows. Developed in collaboration with Empirical Labs founder and FATSO designer Dave Derr, the UAD Empirical Labs FATSO delivers the only authentic plug-in emulations of the original FATSO analog hardware, combining tape-style saturation and compression in one essential plug-in.

From adding warmth and subtle harmonic color to vocals, to slamming drums with thick saturation, FATSO brings the sounds used on recordings spanning artists from Willie Nelson and Bonnie Raitt to AC/DC, Pearl Jam, and Soundgarden to any DAW.

Key Benefits:

- The Only Authentic FATSO. Get the same tape and saturation processing heard on recordings by AC/DC, Pearl Jam, Soundgarden, and more
- Two Plug-Ins. Access iconic tones with FATSO Jr or get deeper compression control with the FATSO Sr
- Four Compression Modes. Glue buses and mixes together with Buss, G.P., Tracking, and Spank settings
- Warmth for Everything. Slam drums, make bass pop on small speakers, or warm up a vocal instantly
- Beyond the Hardware. Enjoy features like sidechain filtering, variable transformer saturation, and deeper compression parameters

The UAD Empirical Labs FATSO Tape Simulator is available now for an introductory price of \$79 USD (regularly \$149 USD) through December 31, 2026. Current owners of the Apollo DSP version of FATSO can upgrade to the native version for \$2.99 USD. UAD Empirical Labs FATSO Tape Simulator is also now included in UAD Spark Studio, a music production subscription to UA's full native plug-in library.

UA releases Empirical Labs FATS0 Tape Simulator Plug-Ins
