UJAM UFX LOFI & DISTORT

UJAM introduces UFX LOFI and UFX DISTORT as the latest additions to the UFX series, joining REVERB, DELAY, and FILTER. UFX LOFI focuses on degraded, character-rich textures inspired by tape wear and early digital artifacts, while UFX DISTORT ranges from subtle saturation to aggressive clipping and foldback. Both plug-ins pair their core effect engines with a dedicated Filter section with 40 presets, a Finisher module with 50 presets, and intelligent randomization, providing fast creative results and flexible sound-shaping for drums, vocals, keys, guitars, bass, or full mixes.

“Producers already have countless effects - it’s the creative spark we focus on,” said Peter Gorges, Co-Founder of UJAM and the mind behind the UFX series. “Instead of building long chains of plug-ins, UFX lets you jump from a filtered bitcrush to a tape-flavored grain cloud in an instant. After REVERB2, FILTER and DELAY, the new LOFI and DISTORT continue that idea, and we’re proud of how they turned out.”
