UJAM Voxcraft

UJAM introduces Voxcraft, a creative vocal multi-effect plugin designed to help vocals sit confidently in a mix with clarity, character, and movement. Marking the company's first title dedicated to vocal processing, Voxcraft applies UJAM's familiar no-fuss design approach to vocal production, offering a fast and intuitive way to shape distinctive, production-ready vocal sounds.

Rather than focusing on vocal repair or cleanup, Voxcraft is built for creative processing and sound design. At its core is a voice-shaping section that allows users to transform vocals through tuning, formant shifting, and voice multiplication, followed by a curated chain of vocal-optimized effects for dynamics, character, filtering, delay, reverb, and rhythmic chopping. Together, these tools turn raw vocal recordings, samples, and loops into expressive, mix-ready results, ranging from vintage-inspired and lo-fi textures to distorted, chopped, and futuristic vocal effects, without the need to stack multiple plug-ins.

Jam City, a songwriter and producer known for work with Olivia Rodrigo, Lil Yachty, and Kelela, has been using Voxcraft in recent projects, calling it "truly transformative for vocals and effective on other audio sources too," adding, "I'll be having fun with this for a long time to come." Peter Gorges, Co-Founder of UJAM, underscored the plugin's creative-first intent. "To maximize flow and inspiration and eliminate frustration with technicalities, we deliberately designed the interface so
