

UnitedPlugins unleashes QuickVox

UnitedPlugins, an innovator in audio software, announces the release of QuickVox, a revolutionary vocal multi-effect plugin from Instant Audio. Designed to bridge the gap between studio-quality vocal processing and the demands of live performance, QuickVox delivers powerful effects with unparalleled efficiency and intuitive control, ensuring performers and producers can achieve pristine vocal sounds with ease. Its incredibly low CPU usage and dedicated "Live Mode" screen make it an indispensable tool for computer-based vocalists across all genres.

QuickVox features three independent, identical rack units that allow users to craft unique effects chains for different parts of a song, such as verses, choruses, and intros. These settings can be switched between instantly for ultimate on-stage flexibility. Each rack hosts five powerful effects modules, each with three simple controls, allowing for a wide palette of sounds. Users can transform vocals with 11 special effects, including Vocoder, Autotune, rhythmic Comb Filters, and experimental Ring Modulators. For adding grit or aggression, there are 8 distortion types like Tube, Tape saturation, Fold, and Amp simulations. QuickVox offers modulation effects like Chorus, Tremolo, Flanger, and Phaser to inject movement

and depth. Users can also craft intricate rhythms and expansive soundscapes with Delay effects such as Digital, Tape, stereo Pingpong, and spacious Wide delays, and place vocals in the perfect acoustic space with 12 types of Reverb, from an intimate Room to a vast Hall or Cathedral. A comprehensive Mix Section further polishes the sound with a Gate, Leveller, De-esser, musical EQ, and a powerful Compressor.

QuickVox is poised to become the go-to solution for artists seeking professional vocal processing in both studio and demanding live environments. Its combination of sonic versatility, intuitive controls, and robust performance ensures that your vocals always sound their best, no matter the setting.

QuickVox is compatible with major DAWs on Windows and macOS. A fully functional 15-day trial version will be available. QuickVox is set to be published on June 23rd. The regular price for QuickVox will be €79, with an introductory price of €19 until the end of July.
