Universal Audio Capitol Studios

Universal Audio Inc. (UA), a company with expertise in audio production tools, announces Capitol Studios, a new native room modeling and reverb plug-in for macOS and Windows. Capitol Studios has been a cornerstone of recorded music since the Capitol Tower opened in 1956, its studios designed to match the building’s futuristic ambition, with precise acoustics and subterranean echo chambers.

Now, with Capitol Studios, musicians and producers can mix vocals, drums, guitars, and more in Capitol Studios A and B — home to records by everyone from Frank Sinatra and Bob Marley to Green Day and Daft Punk. The plug-in brings the studio’s rooms, microphones, processors, consoles, and famed underground echo chambers into any DAW.

"Capitol Studios remains an integral part of record-making history, and we wanted to capture what makes these rooms special," says Will Shanks, Senior Product Designer at Universal Audio. “Together with the Capitol team, we’re bringing the sound of these iconic rooms to more musicians and producers, wherever they create.”

Key Benefits:

- Capitol Studios A and B. Track vocals, drums, and ensembles in the same rooms Frank Sinatra and Billie Eilish recorded in.
- A Historic Mic Locker. Hear tracks through vintage microphones with setups

curated by Capitol alum Steve Genewick.
- Dynamic Room Modeling. Drag mics around the room and hear the space respond in real time.
- Decca Tree Ensemble Setups. Send strings, horns, and vocal groups through the time-tested three-mic orchestral array used on countless albums.
- Capitol’s Underground Reverb Chambers. Add space and depth from four storied echo chambers beneath Capitol Tower.
- Classic Consoles and Outboard. Mix through Capitol’s priceless large-format British consoles and trusted in-house analog gear.
- Presets from the Pros. Start with settings dialed in by past and present Capitol engineers, producers, and musicians who know these rooms best.

Capitol Studios is available at uaudio.com and through authorized UA retailers starting November 4, 2026. It’s also included with a UAD Spark Studio subscription, alongside 70+ plug-ins and instruments plus the LUNA Studio DAW.
