# VSL Big Bang Orchestra 2.0

The Vienna Symphonic Library announces the release of Big Bang Orchestra 2.0, a major update to its acclaimed orchestral sampling series recorded on the legendary Stage A of Vienna Synchron Stage. With this release, the entire Big Bang Orchestra (BBO) series has been restructured into seven comprehensive Packs – Tutti, Riffs, Strings, Woodwinds, Brass, Percussion, and Choirs – now featuring the brand-new Flow View for intuitive navigation and an uninterrupted creative workflow. All sample content has been losslessly compressed, resulting in significantly smaller file sizes without compromising audio quality. This update offers music creators a seamless path to epic orchestral sound – faster, leaner, and more creative than ever, with entry-level prices starting at €65 during the introductory period.

Registered users of one or more of the 27 discontinued BBO Packs benefit from free or discounted upgrades to the new BBO 2.0 versions. Those who have registered all earlier Packs included in a given BBO 2.0 Pack will receive the upgrade free of charge. All new Packs are fully backwards compatible, ensuring that existing projects created with the previous version open seamlessly.

Nothing compares to the sound of an entire orchestra playing together – the energy in the room, the interaction between the musicians, and the majestic resonance of Stage A of Vienna Synchron Stage uniting everything into one massive, thrilling

experience. This is the magic captured in every Big Bang Orchestra recording: the synergy of world-class musicians performing as one, breathing and responding to each other in real time. The vast space of Stage A, with its natural depth and clarity, produces a sound that is both transparent and lush – perfectly suited for epic film scores, dynamic game music, and grand orchestral arrangements.

Renowned as one of the world’s premier scoring stages, Vienna Synchron Stage has hosted hundreds of sessions for major international productions, with the Vienna Synchron Orchestra performing for clients such as Netflix, Disney, Marvel, Amazon MGM, and many others. Each recording resonates with that same cinematic energy – a sound that continues to define the art of modern orchestral scoring.
