The Concert D is a masterpiece of both sound and design. To capture its full range of nuances, Vienna’s engineers developed a highly precise motion-control system featuring a solenoid-operated, noise-free “robot finger.” This micro-controller moves the finger with superhuman precision, allowing for flexible curvatures in both key down-strokes and release movements. While offering fewer velocity layers than the premium Synchron Concert D-274 collection, the “Essentials” version delivers breathtaking realism. Recorded in the exceptional acoustics of the expansive main hall of Vienna Synchron Stage – renowned for its warm, transparent, and natural sound – this space serves as the perfect backdrop for the majestic D-274.

The software instrument includes masterfully crafted presets that users can shape to create their individual Steinway tone. From adjusting resonance and shaping individual key dynamics to filtering specific ranges or even tweaking individual notes, the intuitive interface of the Synchron Piano Player gives users unparalleled creative control while offering a natural, hyper-realistic playing experience. Body resonance, sympathetic resonance, additional algorithmic reverb, and even pitch, volume and EQ per note can be adjusted easily in the user-friendly interface.

It is worth mentioning that Concert D-274 Essentials is included as a bonus library in VSL's Studio Special Edition Vol. 1.
