Voyage Audio Spatial Mic Converter

Voyage Audio introduces Spatial Mic Converter v 1.6.5. The plugin installer now includes a new Audio Unit (AU) component, making it easy to leverage the Spatial Audio capabilities of DAWs like Logic Pro.

The company has heard from many of its costumers that they want to use Logic Pro's built-in personalized binaural rendering and head-tracking, along with the ability to easily create, mix and deliver audio for Dolby Atmos. Whether working on music, sound design, podcasts, or post production, Spatial Mic Converter 1.6.5 coupled with either Spatial Mic USB or Spatial Mic Dante is the ideal tool for taking your audio to the next level.

Windows and macOS users of Spatial Mic Converter AAX and VST3 should also update to take advantage of the latest maintenance and minor fixes. Download now on the Voyage Audio website at the link below.
