

Waves Audio Announces V13

New Version of Waves Plugins Including New Apple M1 Compatibility

Waves Audio, a developer of professional audio signal processing technologies and plugins, announces Waves V13, the latest version of Waves plugins.

Waves V13 plugins are now fully and officially supported in Apple M1 computers running M1-compatible DAWs. Waves V13 plugins are now also fully supported in the just-released Microsoft Windows 11 operating system. Further, Waves V13 updates include HiDPI graphics for select plugins plus additional improvements.

The latest V13 updates join the new features recently released in Waves V12 and V12.7 plugins, including resizable plugin GUIs, the new Waves Preset Browser with instant text search, the new Waves User Preset System, and more.

Updating your plugins to V13 helps you future-proof your sessions and ensure your Waves plugins will remain fully compatible with the latest operating system and DAW versions. This way you can stop worrying about technical details and focus your attention on what matters most – your creative workflow.

To update to V13, your Waves plugins need to be covered by the Waves Update Plan, the complete care and support plan for Waves products. The Waves Update Plan comes free for one year with every new Waves plugin or bundle purchase and is renewable at any time afterwards. Owners of products covered by the Waves Update Plan also get:

- Second licenses for any covered products, for the duration of their coverage; second licenses can be used on a different computer, without having to move licenses back and forth between devices.
- Premium tech support, including phone, email & personal remote assistance via TeamViewer.
- Exclusive free access to Waves Premium Masterclasses, plus exclusive discounts on Mix With The Masters VOD masterclasses – featuring GRAMMY-winning studio legends Young Guru, Chris Lord-Alge, Andrew Scheps, Timbaland, Andy Wallace, Jaycen Joshua, Tony Maserati, Sylvia Massy, Finneas (Billie Eilish), Leslie Brathwaite, Lu Diaz and more.

Waves Audio dedicates significant effort and software development resources, in order to ensure that the plugins that users have invested in, whether recently or years ago, will remain compatible with all the latest major DAWs and operating systems. V13 is the latest in Waves' ongoing updates, allowing producers, musicians and engineers to continuously focus on creating the best music and audio they possibly can, now and in the future
