Waves Audio Voice ReGen

Waves Audio (booth 2722) is an Emmy and Technical Grammy Award-winning pioneer in audio technology, trusted by top studios, broadcasters and content creators worldwide. For over 30 years, the company’s innovations have powered workflows across music production, recording, mixing, mastering, sound design, post-production, live sound, broadcast, major motion pictures, top-selling video games, and commercial and consumer electronics including laptops, smartphones, smart speakers, gaming headsets and TVs. Now, Waves offers Voice ReGen, an AI-powered voice enhancement service designed to deliver flawless sound for videos, podcasts and all forms of content creation.

Waves Voice ReGen is a new AI-powered online service that provides content creators with instant, professional-quality voice cleanup without the need for audio expertise, reshoots, or additional gear. Today’s creators know visuals matter, but many still struggle with audio such as background noise, room echo, uneven levels or recordings that simply don’t sound “pro.” Great sound is essential for engaging viewers and building trust, yet it’s often the most challenging part of production. Voice ReGen solves this instantly. Creators simply upload their audio or video, and the web app automatically delivers a polished, broadcast-ready voice track in seconds.

Waves Audio leverages over 30 years of award-winning audio technology in this new service. The company’s innovations, honored with an Emmy, a Technical Grammy, and multiple industry awards, empower the workflows of top engineers in

music, film, broadcast, and live sound. With Voice ReGen, this same pro-level technology is now available to every creator.

Voice ReGen goes far beyond basic cleanup:

- It removes background noise and room echo, restores missing frequencies to achieve a fuller tone, smooths out volume inconsistencies, and enhances presence, delivering a natural, confident voice. This service also includes a built-in teleprompter to help creators deliver scripts clearly and reduce retakes.
- Users can now record video or audio directly into Voice ReGen by selecting their camera and microphone, viewing a live preview, and capturing video inside the app.

Clear sound isn't just "nice to have." Studies show that listeners trust and stay engaged with content that sounds clean and consistent. Poor audio drives viewers away, even when the visuals are great. Voice ReGen ensures your content sounds as good as it looks.

Voice ReGen is available in two tiers:

- Creator: For regular content production that requires consistent clarity and noise reduction.
- Pro: For professionals who handle large volumes of audio requiring advanced, reliable cleanup.

In a landscape where engagement is everything, Voice ReGen helps creators meet today's standards. It transforms ordinary or flawed recordings into polished, professional sound, effortlessly. Great audio is no longer optional, and with Voice ReGen, it's finally within reach for everyone.
