WeissKlang L1 Plus

A compact large-diaphragm condenser microphone with switchable polar patterns and high-resolution sound – designed for maximum flexibility in professional recording environments. At the heart of the L1 Plus lies the dual-diaphragm WMK-1D capsule. Based on the original WMK-1 design, it offers a precisely tuned frequency response, a presence lift around 10–11kHz, and a natural, transparent sound – now with cardioid, omnidirectional, and figure-8 patterns.

This allows the L1 Plus to be perfectly adapted to any recording situation: speech, vocals, instruments, room ambience, or stereo techniques such as Mid/Side and Blumlein. The transformerless circuit design, built with carefully selected components, achieves a self-noise of just 4dB-A. Transients are captured in only 14 microseconds – ensuring a high-resolution reproduction of the finest details.

Manufactured in Germany, the L1 Plus features a robust, low-resonance body. The toggle switch is easily accessible, durable, and engages with a clearly defined click – for reliable switching without compromise. Reduced CO2 footprint, fully recyclable packaging, an FSC-certified wooden case, and a USB stick with all relevant documentation – for pure sound and peace of mind.
