Xaoc Devices Kamieniec II & Allpass Expansion

Xaoc Devices introduces two new products: Kamieniec II and its Allpass Expansion sidekick. Kamieniec II is an updated and extended revision of Kamieniec - an analog module inspired by a range of classic phaser effect units from the 1970s. Xaoc Devices aimed to preserve the classic sound while making Kamieniec versatile enough to shine with any modular sound source. The newly released module shares the basic specifications with its predecessor: 4 and 6-stage outputs, built in triangle LFO (with a separate output in the true modular spirit), manual resonance control (up to extremely high values), and spicy feedback routing modes. On the other hand, Kamieniec II is a truly new beast with redesigned circuitry and new features, such as voltage control over resonance, a third feedback mode, and an LFO reset input. Xaoc Devices have retained the chaining feature and they are glad to say Kamieniec II is fully compatible with the original Kamieniec, so you can easily mix and match both generations of the module should you develop a craving for more stages.

Want even more stages without sacrificing precious HP in your case? Xaoc Devices have got you covered. Enter the Allpass Expansion - an optional circuit board installed at the back of Kamieniec II. It adds up to 16 sweepable stages for a total of 22, making Kamieniec II one of the most multidimensional and versatile analog

phasers available in Eurorack. Oh, and one last thing - Kamieniec II is 10HP. Both products are available now.

Prices:

- Kamieniec II - 280 EUR
- Allpass Expansion - 90 EUR

Main features Kamieniec II:

- width 10HP
- depth 31mm (including cable bracket)
- +60mA/-60mA
- Analog 4/6-stage phaser inspired by the 70s classics
- Simultaneous four and six-stage outputs
- Voltage controlled resonance
- Onboard voltage controlled wide range syncable LFO
- Additional external modulation input
- Independent LFO output
- Three feedback modes
- Chainable for multi-stage phasing

Main feature Allpass expansion:

- 0HP, circuit board mounted at the back of the Kamieniec II module
- transforms Kamieniec II into a long-type phaser unit with up to 22 stages
