

Xaoc Devices Konin

Xaoc Devices introduces a new product: the Konin Amplitenuverter is a small utility module, 4HP wide. It is designed for precise manual control of gain and attenuation across two channels. Whenever you need to boost a weak signal by up to +20dB or tame it down to just 1% of its original amplitude (or even less), Konin is ready to oblige. It also serves as a versatile voltage source, spanning the full range from -10V to +10V, or fine-tuning to 10mV, all adjustable with a single, smooth turn of the knob. It can be a simple dual attenuator as well.

Main Features:

- width 4HP
- depth 31mm (including cable bracket)
- +15mA/-10mA
- precision attenuator
- attenuverter
- signal amplifier up to +20dB
- dual adjustable voltage source

Konin costs 90 EUR and is now available.

Xaoc Devices introduces the Konin Amplitenuverter of 1963
