Zaor MIZA Flow

Zaor Studio Furniture announces the MIZA Flow, a new generation of studio, AV, and production desk, for NAMM 2026 in Anaheim. The new desk features ZaorBit coupling and an innovative option to attach and position rack space, making it the easiest-to-customise furniture solution on the market. NAMM visitors can find Zaor and the MIZA Flow at booth 14931, ACC North Level 1.

Zaor designed MIZA Flow for sound engineers, producers, broadcasters, and musicians. The innovative MIZA Flow desk responds to the rapidly evolving demands of modern audio, audiovisual, and content creation workflows. Built as a sustainable, flexible and upgradeable platform, MIZA Flow allows users to tailor their workspace to their specific needs and even adapt it over time rather than replacing it. Its base offers a large working surface as well as the signature rock-solid pull-out keyboard tray with adjustable keyboard height. This simple and elegant base can then be enhanced and customised with desktop rack units and a large variety of booms and stands to accommodate the specific requirements of each and every user. MIZA Flow is not a desk – it is your desk.

At the core of Zaor MIZA Flow is a modular architecture that supports a wide range of configurations, from streamlined music creation setups to fully equipped professional production environments. The trick is Zaor’s proprietary and protected fixing system that allows for the addition of one or more rack modules on the desktop. Each rack module offers three units of rack space and can be positioned and oriented freely to create the ideal work environment for the application at hand. This ingenious solution makes the desk perfect for every application, offering sheer endless possibilities to tailor and fine-tune its setup to the specific requirements at

hand. It can even expand with the requirements: start with one module, later add a second one when the need for rackmount gear has grown. And why not have your go-to preamps all in one module and take them with you when you work somewhere else, only to easily re-attach the rack when you are back? The Zaor MIZA Flow unleashes your gear.

The slot for the rack modules of the Zaor MIZA Flow serves a second purpose: the integration of ZaorBit Retro. ZaorBit is the result of a cooperation between Zaor and the renowned stand- and boom-solution manufacturer Triad-Orbit. With ZaorBit Retro, the patented IO quick-release system from Triad-Orbit is easily integrated into MIZA Flow, making it possible to quickly attach microphone booms, camera stands, tablet holders and more. The Triad-Orbit solutions hold everything firmly in place, and with the quick-release system, switching between different setups is extremely fast, easy, and convenient.

The MIZA Flow perfectly fits into the philosophy of Zaor Studio Furniture to design and build high-quality furniture solutions that support the workflow of creatives and media professionals. “We have been very successful with the MIZA line and wanted to go several steps further in both functionality and style to meet today’s challenges,” says Gilles Bartholmé, COO, Zaor Studio Furniture. “With MIZA Flow, we have created a highly flexible workspace that can accommodate additional attachments through our attachable rack modules and our collaboration with Triad Orbit. Our fixing system is 100% safe, 100% flexible, and allows an almost unlimited number of positions, angles, and combinations.” Like all other products from Zaor, the MIZA Flow is produced in Europe from selected materials. It uses strong wood particle board combined with exquisite solid oak panels to create clear lines, a modern design, and long-term durability.

Zaor MIZA Flow at NAMM 2026:

- 22nd – 24th January 2026
- ACC North Level 1
- Booth 14931
- Anaheim Convention Center
- Anaheim, California, USA
