Zoom G2 FOUR/G2X FOUR

Zoom G2X FOUR

Zoom is announces the G2 FOUR and G2X FOUR - the latest evolution of their highly acclaimed multi-effects processors for guitar. The G2 FOUR / G2X FOUR take amp modeling to the next level as each of the 22 faithfully reproduced models of classic amps are now built with Zoom's new innovative Multi-Layer IR technology. Multi-Layer IR´s are composed of 3 individual IR´s captured at 3 different volumes in order to recreate the exact tonal characteristics and feel of playing through classic amps and cabinets at different volumes.

Zoom's new cross key navigation switches help you control the pedal using just your feet and with the Guitar Lab App for iOS and Android it is easier than ever before to create your own signature sounds from over 100 different effects with up to 7 to be used simultaneously. Both models also feature an on-board rhythm machine with 68 pattern and a 80 second built in looper for songwriting or to add layers to any performance. And when connecting the G2 FOUR / G2X FOUR to your computer or smartphone via USB you can record with your favorite effects and amp models. Preloaded with 250 presets, each patch recreates the sound of an iconic song from the 50's to today to provide guitarists with more tone variations than ever before

The G2 and G2X FOUR will ship in December 2022.
