Zoom MS-50G+ MultiStomp

Zoom introduces the new MS-50G+ MultiStomp, which combines the power of a multi-effects processor into a single stompbox. With 100 effects, guitarists now have the perfect utility pedal to compliment their personalized pedal board. The MS-50G+ features the latest Drives, Modulations, Delays, Reverbs, Compressors, Filters, and Special Effects from Zoom. You can choose from classic effect

emulations to Zoom originals, including preamps that are developed with our Multi-Layer IR technology.

Chain up to 6 effects to design and save your own custom patches. The LCD screen changes color with each category making it easier to distinguish effect types while scrolling. The MS-50G+ is built with a sturdy metal frame designed to withstand the rigors of live performance. The Cross Key switches allow you to instantly switch between effects with a tap of your foot. Adjusting and tweaking parameters for each effect can be done with the four encoder knobs.

The MS-50G+ includes two ¼” outputs supporting stereo effects like reverbs, choruses and delays. The onboard chromatic tuner uses the color backlight to give visual feedback to help you tune quickly and accurately. It supports all standard guitar tunings as well as open & drop tunings. The MS-50G+ runs on 2 AA batteries, USB power or AC power. With a growing library of patches and effects, guitarists can continue to expand their sound with the Handy Guitar Lab for MS-50G+ app for iOS. It is coming Soon to the App Store.

Preamp examples:

- 7 HEAVEN DRIVE combines a very tight low end with expanded dynamic response, perfect for 7 and 8 string guitars.
- VELVET DRIVE provides a smooth character that balances the dynamic response between the wound and plain strings, enabling you to play both lead and rhythm.
- KRAMPUS DRIVE combines the brightness of an 80's British preamp, with the solid low range of a modern high gain amp.

Effect examples:

- SWELLVIBE: Unlike any standard vibrato that starts modulating the signal from the start, it applies pitch modulation with a time lag affecting only the sustain of your sound. It inspires unconventional ways for playing ambient pads.
- GEMINOS: A real-time doubling effect that adds thickness and width by triple overdubbing the original dry signal. This reproduces a random organic texture when playing chords and powerful sustain for solos.
- LOOPROLL: An effect allows you to use the footswitch to sample and hold what you play.

Technical Specifications:

- User patch memories: 100
- Sampling frequency: 44.1 kHz
- A/D conversion: 24-bit 128× oversampling
- D/A conversion: 4-bit 128× oversampling
- Signal processing: 32-bit
