

Zoom MS-80IR+ MultiStomp

Introducing the new MS-80IR+ MultiStomp for Guitar - The Dream Amp Collection. The MS-80IR+ gives guitarists an unbelievable assortment of amps created using the latest in IR and modeling technology. It comes fully stacked with 16 of the world's most revered amps and cabs plus 7 expertly crafted Zoom originals. By analyzing individual sections of circuitry, Zoom's engineers meticulously modeled

the greatest amps in history, faithfully reproducing the tone of each amp on the MS-80IR+ in more detail than ever before.

Zoom's innovative Multi-Layer IR technology, combines 3 IR's recorded at different volumes to recreate the sound and feel of playing through classic amps and cabinets. Choose from 5 studio effects to add natural reverb to your sound. These include Concert Hall, Large Chapel, Live Music Club, and more. The MS-80IR+ also has 12 effects including noise gates, EQs, and delays. Combine an amp, studio sound and an effect to craft your own unique patches. The MS-80IR+ features stereo effects and dual input and output jacks allowing you to create immersive stereo tones.

Whether an idea hits you at midnight or you're one noise complaint away from getting evicted, the built-in headphone jack lets you practice anytime, anywhere. When playing live, send one signal with Amps/IR's to a PA, and the other without IR's to your amplifier using the Output Splitter. Record into your computer or smartphone by connecting the MS-80IR+ via USB-C.

Fine-tuning and adjusting amp models and effects can be done with the four encoder knobs. The Cross Key switches allow you to easily switch between amps, effects and patches with a tap of your foot. The onboard chromatic tuner uses the color backlight to give visual feedback to help you tune quickly and accurately. It supports all standard guitar tunings, including alternate and drop tunings. With USB MIDI, you can connect the MS-80IR+ to other MIDI gear to remotely trigger patch changes.

Using Guitar Lab you can browse effects, backup patches, and load up to 80 IR's. Guitar Lab for MS-80IR+ is available for iOS. Personalize your guitar tone by loading IR's from your own collection.
