

Zoom NEURIG AMP & EFFECTS NEURAL MODELER

ZOOM introduces the ZOOM NEURIG Amp & Effects Neural Modeler. The future of tone is in your hands. With Zoom's newest DNA neural modeling, NEURIG gives you the power to take the cutting edge in your own direction. Zoom's new-gen DNA (Dynamic Neural Archive) Engine goes beyond ordinary modeling. NEURIG meticulously models how classic amps and effects respond across every knob and parameter, , recreating the organic, dynamic interaction of GAIN and EQ controls. With 30 DNA amps and effects, NEURIG gives you the authentic sound and feel of the real thing.

NEURIG's native NAM A2 support opens the door to a never ending library of tones. Load captures of amps, pedals, cabinets, and complete signal chains from a massive open-source community. Connect NEURIG to Zoom's SessionZ Pedal app for free access to more than 700,000 TONE3000 NAM captures and IRs. Find everything from boutique pedals to vintage amps, then load your favorites directly onto your NEURIG. NEURIG's 22 Multi-Layer IRs each combine three IRs recorded at different volumes to recreate the sound and feel of classic cabinets. Select your mic and mic placement to find your sweet spot.

The SessionZ Pedal app was developed to give you more ways to create and play with NEURIG, with new features planned for future updates. Connect over Bluetooth

to explore new tones, edit and manage your rigs, and jam along with your favorite tracks. Describe the tone you want and the SessionZ Pedal App builds the rig for you through RIG AI. Ask for the sound of a specific song, or simply describe the mood, feel, or ambience you're after. Jam or stream music from YouTube or your own saved tracks via Bluetooth on your NEURIG and create the matching guitar tone by press of a button.

When playing back from YouTube or files on your phone you can control play, pause, skip, fastforward, and rewind, hands-free, right from the pedal. AI stem separation works on audio files from your phone. Isolate the vocals, guitar, bass, or drums to focus on a specific part, or jam along. Touch-based editing from the app puts every core function right at your fingertips. You can record stereo loops up to 45 seconds long, then overdub, undo, and redo directly from the footswitches. Stay in tune with standard, open, and DADGAD tunings, plus support for 7-string and down-tuned guitars.

NEURIG is the world's first pedal with NAM A2 capture. Connect an amp, pedal, or full signal chain and hit capture. NEURIG sends it over Wi-Fi to Tone3000 for AI analysis, then returns a NAM capture ready to use in any rig. Each 'RIG' lets you use one complete setup with all the tones your song needs. Each RIG can contain up to 14 amps and effects, with four presets to seamlessly switch between them as you play. NEURIG includes 75 ready-to-play RIGs, with space for up to 200 of your own.

32-bit float processing means you have enough headroom to stack effects without clipping or losing detail. NEURIG switches between effects and rigs without any audio dropout. Moreover, you can choose from 139 effects, including drives, modulation, delays, reverbs, and more. Delay and reverb trails ring out naturally, even mid-change. NEURIG also lets you run effects in parallel to build layered tones or split your signal to shape separate sounds for your stage amp and the PA.

NEURIG puts serious power behind simple controls and dual touch screens that make everything easy to reach. It's under 2 pounds, compact, and ready to drop into your existing pedalboard or take center stage on its own. NEURIG runs on a built-in rechargeable battery with up to 4.5 hours of play on a single charge. Take the stage or set up to practice anywhere, no AC required. NEURIG can also be powered via USB. With using NEURIG as an audio interface, you can use it with your

computer, phone, or tablet to record, livestream, or play along with your favorite tracks. Keep your pedal up to date with firmware updates over Wi-Fi, no computer required.
