Zoom PodTrak P4next

Zoom introduces the PodTrak P4next Podcast Recorder, featuring 4 XLR inputs with high-gain preamps and next-gen features like AI noise reduction, tone shaping, and voice compression - making broadcast quality podcasting easier than ever. Don’t let hums, buzzes, and street noise ruin your conversation. Let AI noise reduction learn and remove unwanted noise, keeping your voice clear, natural, and detailed.

The Tone feature instantly adds polish to your voice with EQ and de-essing, reducing harshness and adding warmth for a clear, professional podcast sound. ??Broadcast Ready?The built-in compressor keeps your podcast sounding crisp and balanced, smoothing out sudden shouts, laughter, and whispers. Some microphones need more power. The P4next’s four XLR inputs provide up to +70dB of gain, allowing you to use even the most demanding podcast mics. 48v Phantom Power is available on all channels.

The P4next’s compact design and versatile power options give you more than portability - it gives you the freedom to record your podcast anywhere. Run it on two AA batteries or via USB from a mobile battery, bus power, or AC adapter (12W or above). Bring in two remote guests via USB, Bluetooth (must use BTA-2 Bluetooth adapter), or the TRRS input. Use the remaining 3 mic inputs for a 5-person podcast. The built-in mix-minus removes echo and feedback automatically. The P4next has 4 headphone outputs with individual volume controls for everyone at the table.

For podcasters working with video, the P4next records in 48 kHz/24-bit, the standard for video production. Connect the P4next to your phone and record pro-quality audio directly onto your phone’s video, no editing required. Trigger intros,

jingles, and sound effects with a single tap. Choose from built-in sounds like air horn, applause, laughter, or rimshot. You can also record directly to the pad or load your own.

Connected via USB-C, the P4next works as a plug-and-play audio interface for streaming or recording on PC, Mac, iOS, or Android - with full multitrack capability when you need it. The P4next saves a ready-to-publish stereo mix plus each channel individually for fine-tuned production - all straight to a microSD card up to 2 TB. The P4next’s voice guidance lets you navigate menus and controls with audible descriptions through your headphones.
