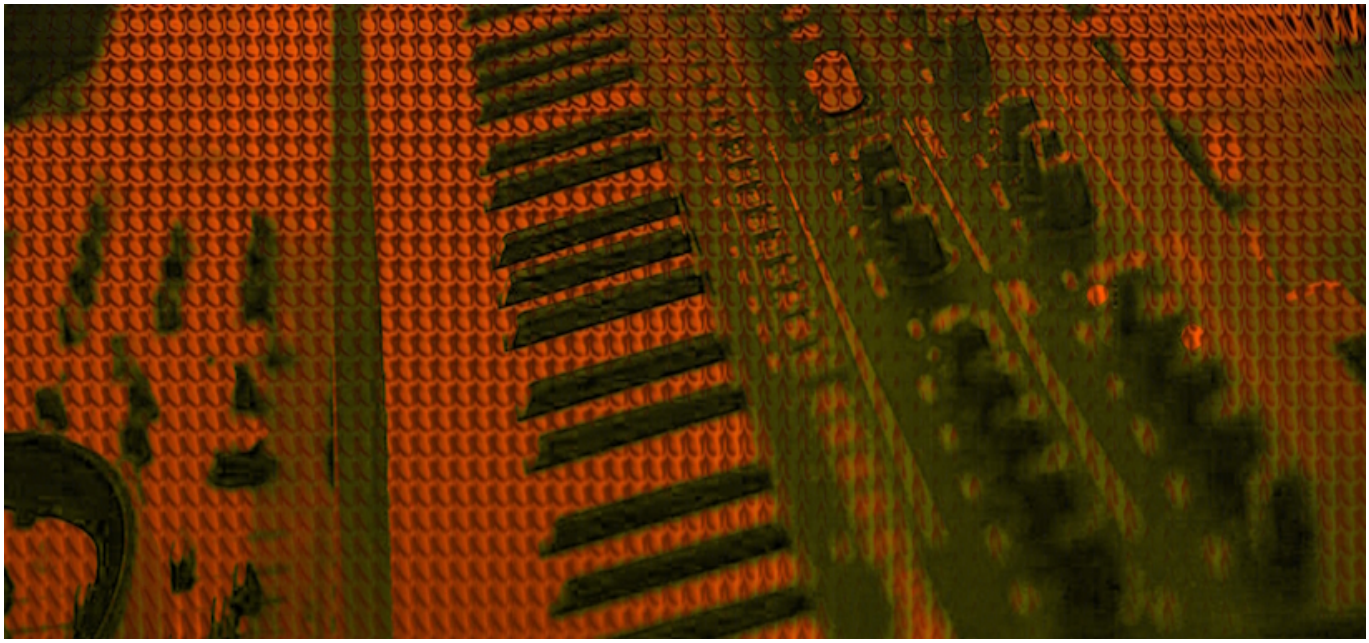
Arturia MiniFreak 5.0 Update



MiniFreak update 5.0 is here. This free update lets you bring your own material into MiniFreak. Import your own samples and wavetables, let MiniFreak handle the conversion, and shape them instantly with the Freak engines, in software and on hardware. A new Factory Bank v5.0 also showcases exclusive new sample and wavetable content across 23 brand new presets.

What's new with update 5.0?

- User sample import: Import your own WAV, AIFF, and FLAC samples and reshape them with MiniFreak's sample-based engines, including granular processing, for unexpected textures and custom sound design. Drop your file into the engine, or use the Import button, and
- MiniFreak V handles the conversion and trimming.
- User wavetable import: Import mono wavetables from your favorite libraries, including Pigments, and twist them on the fly with the
- Wavetable engine. MiniFreak V handles the conversion.
- New Factory Bank v5.0: 23 brand new presets bringing exclusive new sample and wavetable content, for you to explore with your favorite Freak engines.

All of update 5.0 applies to MiniFreak V, so software users get the same import features and the new preset bank. MiniFreak update 5.0 is available now for MiniFreak hardware and MiniFreak V users.
