Behringer JN-80

Behringer unveils the JN-80, an eight-voice analog synthesizer built for creators who want real tone, real control and real impact. With authentic DCOs, a 24 dB 3109 filter and a multi-stage BBD chorus, the JN-80 delivers a bold, wide and unmistakably analog sound. Poly, Unison and Double modes let you shape massive basses, cutting leads and evolving analog textures instantly. Hands-on controls, sub-oscillator, global noise, an advanced arpeggiator, 400 presets (first 100 by Ultimate Patches) and full MIDI with NRPN and CC support offer a fast, flexible and performance-driven workflow. To further expand its sonic range, new Ultimate Patches are also available, adding a refined collection of additional sounds designed specifically for the JN-80.
