DAD Tactile Control

Digital Audio Denmark [DAD] announces Junior – a compact, hands-on controller for the brand's flagship Thunder | Core series of audio interfaces. Junior's customizable physical control surface enables seamless, real-time operation of pre-configured Control | Pack settings, making the best-in-class interfaces more flexible and easy to use than ever before. Junior is available now for MSRP $1,599.

The Control | Pack functionality of DAD's DADman software provides native switching between any set of sources to output destinations – enabling an additional layer of playback redundancy and show control to all Thunder | Core products. Junior provides tactile control of these Control | Pack routing presets via its customizable set of RGB Led illuminated buttons, status LEDs, and character displays. The unit can be connected to any Thunder | Core device via Ethernet and deployed accordingly. Junior is supported by DADman version 5.8 and Thunder | Core firmware version 1.1.0.3 and onward.

"Fast and reliable control of audio production equipment is essential to the Live Entertainment market – a key demographic of our Thunder | Core user base," states DAD COO Mikael Vest. "With Junior, users now can directly access Control | Pack settings with a hands-on interface, providing additional speed and control for critical situations."

DAD Junior Features

- 6 RGB Led illuminated buttons, 6 RGB status Leds and 6 character displays are available
- Control via Ethernet
- Powered via PoE or external power supply
- 4 of the buttons are dedicated switching between Control Pack Buckets, and 4 Leds and displays are showing status and names.
